

DCM VISCOTEC® BLUE

Liquid fertiliser NK 9-5
with biostimulant in gel formulation

■ Composition

Fertiliser – Suspension of compound fertilisers NK with biostimulant based on amino acids of plant origin

9 % TOTAL NITROGEN (N) of which:
9 % organically-bound nitrogen

5 % POTASSIUM OXIDE (K₂O) soluble in water

45 % TOTAL AMINO ACIDS

Derogation number: EM620.D

Product authorised for use in organic agriculture in accordance with Council Regulation (EC) No 834/2007 and Commission Regulation (EC) No 889/2008 and amendments.

■ Characteristics

- high content of nitrogen (N) of plant origin for a fast effect on growth and colour
- has a mild effect on plant roots thanks to its low salt index
- contains no animal ingredients
- almost odourless
- organic nutrients = stimulation of the soil life
- **with biostimulant effect** : the amino acids of plant origin activate the root system. The enlarged root surface area improves nutrient uptake, stimulates aboveground growth and guarantees stronger plants with increased tolerance to abiotic stress
- can be used both continuously and periodically for adjustments during crop growth
- for organic and mineral substrates as well as for field cultivation
- the strictly controlled production process ensures a high purity and permanently stable composition

■ Form

gel formulation applicable through fertigation (suspension):

- can be applied with all types of fertigation systems (sprinkler systems, drip irrigation...)
- highly concentrated product
- easy dosing
- highly water-soluble
- remains stable during storage (no precipitation)
- can be applied in combination with other products

DCM VISCOTEC® BLUE

Liquid fertiliser NK 9-5
with biostimulant in gel formulation

■ Instructions for use and compatibility

Continuous top dressing : 1 - 2 grams/L nutrient solution

Periodical top dressing : 2 - 4 grams/L nutrient solution
e.g. 2x a week

Stir the diluted solution continuously and preferably also aerate.

Flush the piping thoroughly with clean water after application to prevent clogging due to bacterial deposit.

The exact dose depends on the needs of the crop, the time of application (growth phase), the nutrient reserve in the soil/substrate and the intensity of irrigation.

DCM VISCOTEC® BLUE can be mixed with other products such as magnesium sulphate and trace elements. Do not mix with fertilisers containing Ca.

Contact your dealer for more information on product compatibility and dosage for production systems based on EC-control.

■ Storage

Close package tightly after use.

Store at a temperature between 5 and 25 °C.

Keep out of reach of children and pets.

■ Packaging

20 kg bag-in-box

1.000 kg multibox (IBC)
